◆ MDI Makes it Easy to Order 15
Advanced Warning Saves Lives!

TrafficMaster® sign systems warn, channel, re-route and identify — keeping emergency responders safe.

Improve visibility — Retro-reflective signface material returns 60 to 70% of incoming light back to the light source. The signface shows up brightly in headlights or ambient daylight — close up or from thousands of feet away — even when lights are not facing the sign straight on.

Improve effectiveness — Concentrate on the incident while TrafficMaster® sign systems take care of traffic control.

Improve communication — TrafficMaster® sign systems provide a tall-standing barrier, concise warning and directions to passing traffic.

Strong communication

Give motorists precise information. Retro-reflective signfaces are highly visible — day or night.

Barrier protection

Emergency traffic control sign systems help direct traffic from personnel and vehicles at the scene.

Safety policies recommended by both the National Fire Protection Association and the Federal Highway Administration call for the use of retro-reflective fluorescent pink signs for traffic control during emergency operations.*

*Sources: National Fire Protection Association’s NFPA 1500, Section 8.4.27; and Federal Highway Administration’s Manual on Uniform Traffic Control Devices (MUTCD).
TrafficMaster® Sign Stand

The MDI TrafficMaster®
Faster Set-up and More Visible Than Flares!

The TrafficMaster® sign stand is specially engineered for portability, ease of handling, and reliable performance at emergency scenes.

- Quick and easy one-person set-up without tools.
- Kick-release legs simplify set-up and handing.
- Dual-spring base for strong initial tension resists twisting and turning of sign in high wind gusts.
- Aircraft aluminum alloy legs and uprights include rubber leg caps for traction. Adjustable telescoping legs stabilize sign stands on curbs or uneven terrain.
- Easy handling and convenient storage.
- Designed for use with long-lasting DuraLatch® roll-up signfaces and MDI Compact™ signfaces.

Sturdy construction
Constructed of aircraft aluminum alloy and coated steel for maximum rust resistance and durability. Reinforced vinyl sign is highly resistant to harsh conditions.

Kick-Release Legs
Legs on the TrafficMaster® base store in locked, upright position. Kick-release pins deploy legs, letting the user remain standing with an eye on traffic.
DROP & LOCK UPRIGHT
The molded cap helps to channel your MDI crossbrace into the upright. The spring-loaded pin automatically locks your DuraLatch™ roll-up signface or MDI Compact™ signface in place.

Compact storage
Folded sign stand fits easily in vehicle with other equipment. Rolled-up signface can be stored on underside of trunk lid.
The versatile DuraLatch® roll-up signface is the only self-adjusting roll-up signface available. Constructed of pliable EPDM rubber for greater flexibility, the DuraLatch® roll-up signface expands and contracts as needed. And, with less stress to the signface, you'll enjoy longer product life. That's a savings to you. It's so innovative and unique that it's patented.

- Keeps signface taut and readable because the latches continuously compensate for thermal expansion and contraction.
- Absorbs stress caused by gusting winds and passing vehicles.
- Will not disengage in backwinds like corner pocket signfaces.
- It's quick and easy to set up. The straps simply wrap around the cross-bracing and snap into solid tip posts. Bending of crossbrace is not required as in corner pocket signfaces.
- Crossbracing is interchangeable. You don't have to buy crossbraces for each signface.
- The DuraLatch® roll-up signface attaches to the crossbracing with high-strength EPDM rubber latches.
- DuraLatch® roll-up signface stores separately from sign stand.

Experience the DuraLatch® difference.
Engineered for Performance.

The versatile DuraLatch® roll-up signface is the only self-adjusting roll-up signface available. Constructed of pliable EPDM rubber for greater flexibility, the DuraLatch® roll-up signface expands and contracts as needed. And, with less stress to the signface, you'll enjoy longer product life. That's a savings to you. It's so innovative and unique that it's patented.

- Keeps signface taut and readable because the latches continuously compensate for thermal expansion and contraction.
- Absorbs stress caused by gusting winds and passing vehicles.
- Will not disengage in backwinds like corner pocket signfaces.
- It’s quick and easy to set up. The straps simply wrap around the cross-bracing and snap into solid tip posts. Bending of crossbrace is not required as in corner pocket signfaces.

The MDI Compact™
On the Scene
When You Need It!

Concentrate on the incident, while MDI’s signstand, with warning sign, protects emergency responders.

The MDI Compact™ sign system is comprised of an MDI Compact™ sign combined with a 3612®DLK TrafficMaster® sign stand. The system is secured and ready to go. The system deploys quickly for improved safety and efficient emergency traffic control. When you’re done, the MDI Compact™ sign and crossbrace folds down and wraps around undeployed sign stand for easy storage.

MDI Compact™ sign stand and sign (including crossbrace) sold separately.

MDI Compact™ Sign System
Consists of MDI Compact™ sign with a 3612®DLK TrafficMaster® sign stand.
